

Penyu

Last Update: 08/15/2021

Penyu		
Switch Type: Linear		Durock/JWK
26	/35	Push Feel
19	/25	Wobble
5	/10	Sound
16	/20	Context
7	/10	Other
73	/100	Total

Notes

Push Feel

Without the strong tactile bump to hide behind like their release partner in Harimau switches, the issues with the Penyus are a bit more noticeable. While they still are fairly smooth, and have a very pointed and firm bottoming out from the long stem pole, the slight scratchiness and even thinner, plasticky topping out is highlighted the most here in their stock form.

Wobble

Using the newest top housing mold iteration from Durock/JWK at the time of their release, the Penyus have completely stationary top housings and only a marginal amount of N/S and E/W stem wobble that varies across the batch of switches.

Sound

Relative to their release partner in Harimau switches, these sound like the much more louder, sharper, and pointier switch even with the same housing materials in use. This is again one of those instances where the stock sound of a switch matches it's push feel, and the plasticky topping out is yet again a highlight of this category.

Context

Even with a relatively high groupbuy pricing per switch relative to other recent Durock/JWK releases, the choice to do such for charity based in the naming scheme and design of these switches goes above and beyond most switch sales like it. As well, these are hugely accessible at the time of their sale with over 10 vendors running sales for them.

Other

In addition to the wildlife charity, the marketing of the Penyus (and Harimaus) with their 100% biodegradable storage bags make them not only historically interesting now, but hopefully the first of many switches to have the inclusion of such in their sales.
