

Everglide Coral Red V2 Pro!

Last Update: 08/01/2021 (V2)

Everglide Coral V2 Pro!		
Switch Type: Linear		Durock/JWK
22	/35	Push Feel
12	/25	Wobble
5	/10	Sound
10	/20	Context
5	/10	Other
54	/100	Total

Notes

Push Feel

Even though these linear switches are not marred by scratch, the heavy lube job of the Everglide V2 Pro! Line lends a sort of sluggish and thick feeling stroke that is especially present in the Coral Red V2 Pros! While they definitely do feel solid with respect to the 67g. bottoming out weight, this only adds to the sluggishness between housing collisions.

Wobble

On par with other Everglide V2 releases, the housings have the slightest give in the E/W direction as well as noticeable amount of stem wobble in both N/S and E/W directions that lead me to believe you're not escaping stem wobble regardless of keycap profile

Sound

While at lower typing speeds these are muted with a sort of sticky, gloopy housing collision, they only get worse with faster typing speeds as they pick up the thin, prickly top housing collision sound as seen in other lighter weight linears in the V2 Pro! Line.

Context

The biggest seller in these switches of having something hand-lubed rather than factory lubed simply falls leagues short on execution. While the cost and quick drop off of this offering from Everglide has further assured their fading from the limelight, heavier weight linears like these would need to be relubed by hand due to how poorly lubed these were.

Other

While a novel execution with respect to marketing gimmicks, and relatively advanced for their time of release, these switches have not stood the test of time. I've especially heard less of the Coral Red Pro! V2 switches since their release relative to all of the other readily forgotten Everglide Pro! V2s as well.
