

Gazzew U4 Boba 68g (Sample)

Last Update: 08/01/2021 (V2)

Gazzew Boba U4 (68g)		
Type: Silent Tactile		Outemu
28	/35	Push Feel
24	/25	Wobble
9	/10	Sound
15	/20	Context
9	/10	Other
85	/100	Total

Notes

Push Feel

While the tactile bump is likely just the tiniest bit too light for tactile fans to truly enjoy, these firmly sit at a smooth, consistent, and firm feeling light silent tactile option unlike anything that had came before it. If it didn't feature as prominent of a post-bump linear travel region nor as much of its characteristic leathery scratch, this score would be that much higher.

Wobble

Both the stem and top housing wobble are truly skirting the lines of manufacturing perfection. While this means a lesser incompatibility for frankenswitching uses, these have been the gold standard for wobble for switches to compare to since their initial release.

Sound

With only the minor gripe with the consistent, leathery 'scratch' noise present throughout the stroke of these switches, literally everything is silent. Hell, even the scratch noise itself is quiet by modern switch metrics for tactiles and linears alike.

Context

Gazzew's unending desire to provide the best in DIY switches contributes a large part to this score, as these are yet again another incredibly accessible, affordable, and high-quality budget option for those entering the scene. The only issue with this is that since its release he's still continuing to incrementally improve on this Boba line of switches, rendering these bit by bit obsolete as the days go by.

Other

Coming with a sleek look and scheme upon release, these 'GAZZEW' branded switches and mystery material have formed the steppingstone from one of the more popular yet still subtle lines of switches that have progressed over the switch explosion of recent years.
