

Glorious Lynx (Unlubed)

Last Update: 08/29/2021

Glorious Lynx (Unlubed)		
Switch Type: Linear		Tecsee
23	/35	Push Feel
14	/25	Wobble
4	/10	Sound
9	/20	Context
5	/10	Other
55	/100	Total

Notes

Push Feel

While the Lynx are fairly smooth even coming factory unlubed, they are wildly inconsistent on basically every other metric including push feel. Aside intermittent spring ping feeling in *some* switches, the batch I received had wildly inconsistent housing collision feelings almost as if the switches I were testing were simply two completely differently made switches.

Wobble

Again, keeping in mind wide batch variability here, the stem wobble isn't overtly bad, being more noticeable in the E/W than the N/S direction. What is decently bad, and only further exasperated by the variation, is subtle top housing give in the N/S direction.

Sound

Coming quite loud at housing collisions given the polycarbonate over nylon housing design choice, these switches are again marred by intermittent spring ping and an inconsistent sounding but universally thin, hollow, and plasticky sounding topping out. The bottoming out, even though on nylon, isn't much better unfortunately.

Context

Coming as the linear half of the stock Glorious offerings alongside Glorious Pandas these simply fall leagues short of their older siblings. While the packaging, marketing, and all-around availability are still spot on these switches unequivocally are not worth the asking price and fall incredibly short of their aspirations as well as their marketing.

Other

I am not going to lie on this one – I have a great working relationship with Glorious and I *wanted* to like these switches. I just cannot find a way to make a positive of them in stock form, and even their lubed counterparts don't really fare any better (and at a steeper price yet). This is the definitive 'Sophomore Slump' of keyboard switch releases.
