Tecsee Purple Panda		
29	/35	Push Feel
22	/25	Wobble
8	/10	Sound
14	/20	Context
6	/10	Other
79	/100	Total

Notes

Push Feel

For high strength tactiles, these switches are honestly quite impressive on all push feel fronts. They have a solid, firm, and coherent high-set tactile bump with very solid housing collisions and smooth linear transitional regions. If it wasn't for the greater than normal linear pretravel to the tactile bump and the bottoming out on the stem pole, this score would be higher.

Wobble

These switches are incredibly well tolerance consistently across the batch I received. Very little stem wobble in either direction with maybe close to noticeable in the N/S direction and absolutely no top housing wobble whatsoever.

Sound

These switches are very solidly muted and yet still punchy in terms of sound with a full bodied, mid-ranged slapping noise at the tactile bump and topping out. While there is an ever so slight leaf ping noise at higher typing speeds, this is a very hard to hear feature relative to the otherwise loud sounding bumps.

Context

While only recently released in quiet fashion by 1UpKeyboards, and available for a fairly reasonable price, these really are an excellent demonstration of the improvement of quality by Tecsee and just how strong of a switch can be made with their proprietary 'PME' blend.

Other

Aside the praises that this brings to mind with respect to the PME material blend used in these housings, this score is set here mostly because this is clearly attempting to directly capitalize off of the 'Panda' name in much the same fashion as Ethereal Pandas. These switches are great on their own and only stand to cheapen reputation by stealing the name.
