Notes

Push Feel

Greetech Razer Yellows are certainly the best among the Razer switches produced in their short stint with Greetech. While they still do feature a fairly solid bottoming out feeling, a relatively weak bottoming out feeling mixed with a consistent, nagging amount of scratch is what takes away from the feeling of these linear switches.

Wobble

While not altogether out of the realm of commonplace for 2015 Greetech switches, these Razer branded switches have a large amount of N/S and E/W stem wobble in addition to an E/W top housing wobble due to poor mold matching between top and bottom halves.

Sound

While the sound of these switches pretty accurately matches that of the push feeling notes, the overall loudness and prevalence of the scratch over really all other switch sounds, including an ever so slight spring ping, is what really hurts the sound of these switches.

Context

Even though only available prebuilt in Razer boards in 2015, these obviously saw a fairly wide adaptation due to Razer's branding more so than anything else. While certainly a lot less different in change between manufacturers than the Orange or Green versions, these merely sit as an interesting historical note along the history of Razer's switches.

Other

The fact that Razer so quickly switch manufacturers to Kaihua in 2016 clearly demonstrates an 'experimental phase' in Razer's MX style switches, though I feel it was much more likely due to performance issues with the Oranges and Greens. These are a bit 'better' than I had imagined, even though still poor overall.
