Notes

Push Feel

While being a bit more than the 'Ergo Clear' marketing they came with, these switches provide an early-in-stroke tactile bump that is snappy and sits closer towards the higher end of tactility than mid-range without being overbearing. The only real issues with these are an ever so slight pre-travel in the beginning of the stroke and planned, subtle unlubed scratchiness.

Wobble

An ever so slight wobble in the N/S and E/W directions of this stem is the only thing really holding back this score. They are definitely within the realm of unnoticeable, and also come from a great set of molds that leaves absolutely no top housing wobble whatsoever.

Sound

Even though these are just a tinge towards the 'clicky' side of tactility, they have a high pitched, energetic, and mid-toned bump that sounds very rounded and sharp. While not necessarily bad on its own, the stem-leaf ping from the (again, planned) unlubed switches does detract from their stock sound a bit.

Context

In terms of pricing, availability of small packs for testers, options of spring weights, and even included heavier spacebar springs at no extra cost, these switches are near the pinnacle of a buyer's experience in terms of cost, accessibility, and understanding of the market. The only thing holding these back is that these aren't a true 'Kinetics Labs' custom switch, and instead a mixing of JWK capabilities, albeit masterfully, nonetheless.

Other

Another great mid-to-high range tactile offering from JWK which leaves me content for this category of switches and infinitely more interested in future offerings from Kinetic Labs.
