Original Aspiration

28	/35	Push Feel
17	/25	Wobble
4	/10	Sound
10	/20	Context
4	/10	Other
63	/100	Total

Notes

Push Feel

Being that these were produced by JWK and came to me as lubed samples, these are pretty on par with the great quality expected of this factory. The biggest detractors to this score come via way of the light and thin feeling bottoming and topping out portions of the keystroke.

Wobble

While the N/S and E/W stem wobble on these switches are present, it sits as 'likely unnoticeable' with keycaps on. That being said, the top housing has an ever so slight E/W wobble on all of the samples I was sent, which is a bit unusual for a JWK switch, even if opened once or twice prior for lubing.

Sound

These switches are loud. And while it is okay for linear switches to be loud per se, they feature a high pitched, thin, and sharp bottoming out noise with an even sharper topping out noise, which is likely due polycarbonate top housing difference from the UHMWPE bottom housing.

Context

While marketed beautifully, these simply sit simply as another combination of JWK materials, colors, etc. but this time from Wuque Studios.

Other

The biggest detractors to this score come from the fact the switches look nothing like the glassy, diamond-like renders they were sold on as well as the mixed housing materials. Even though more mixed housings are being attempted lately, the combination of PC over UHMWPE simply doesn't work for sound.
