

## Kailh Pro Light Green (Plate Mount)

Last Update: 11/29/2020

Kailh Pro Light Green (Plate)		
22	/35	Push Feel
14	/25	Wobble
4	/10	Sound
12	/20	Context
6	/10	Other
58	/100	<b>Total</b>

### Notes

#### Push Feel

Even though click-jacket style clicky switches tend to suffer a fair bit when it comes to push feel, these do feel marginally better than expected with a short, sharp, yet still flat feeling tactile bump with a much more solid bottoming out feeling. The topping out, though, suffers from the same light, plasticky, and thin feeling as the other Kailh Pro switch line.

#### Wobble

These switches have a noticeable amount of stem wobble in both the N/S and E/W directions, with it being ever so slightly greater in the N/S direction. As for top housing wobble, the Kailh 'clamshell' style mounting leads to absolutely none whatsoever.

#### Sound

These have, much like their push feel, a fairly sharp, short, and yet dull click sound which is marred by a noticeable metallic crunch which is either the spring or unintended interaction with the leaf/click-jacket. These continue to support my stance that click-jacket switches are among the worst clicky mechanisms available in mechanical keyboard switches.

#### Context

While these do deserve some recognition for their longevity, availability, and affordability like their other Pro siblings, these definitely are harder to pitch as 'relevant' with Kailh offering similarly available and long running "S-Tier" clickies in Jades and Naevies.

#### Other

While the context section does take a fairly hard shot at the performance of these switches, they do still stand the test of time versus other, more costly and recently click-jacket style clicky switch releases and to that extent do still deserve more consideration than they have gotten over the years.
