

Everglide Amber Orange V2 Pro!

Last Update: 08/01/2021 (V2)

Everglide Amber Orange V2 Pro!		
Switch Type: Linear		Durock/JWK
24	/35	Push Feel
12	/25	Wobble
5	/10	Sound
10	/20	Context
5	/10	Other
56	/100	Total

Notes

Push Feel

Even though these linear switches are not marred by scratch, the heavy lube job of the Everglide V2 Pro! Line lends a sort of sluggish and thick feeling stroke that is not too pleasant. The saving grace for these switches is their 58g bottom-out force springs which is the optimal weight of those offered in this line of switches.

Wobble

Being on par for Everglide V2 releases, the housings have an ever so slight E/W housing give and even more egregious issues with both the N/S and E/W directions of the stem wobble. Both are likely to be noticeable with caps of any profile on.

Sound

Sticky sounding in the bottom out with plasticky and pointy in the topping out make for a bad linear switch experience. While they are free from scratch sound, these are simply too hollow and thin sounding to be good by today's standards.

Context

While a novel premise with hand-lubed switches from the factory, the V2 Pro! Line of Everglide switches suffer from poor execution on this marketing point. While the cost and quick dropping of this gimmick alone have helped erase it from the limelight, serious usage of these switches would require a manual improvement on the lubrication of these switches.

Other

One of the only good things that was done with respect to the Everglide V2 Pro! Line of switches, and especially with respect to the Amber Oranges is the slightly uncommon 58g bottoming out weight for a linear. If Everglide could keep these and drop the rest of the act in the future there would be a slightly better chance at redemption for this line of switches.
