

## 'Aura' Frost Panda

Last Update: 06/06/2021

'Aura' Frost Panda		
26	/35	Push Feel
18	/25	Wobble
5	/10	Sound
13	/20	Context
5	/10	Other
67	/100	<b>Total</b>

### Notes

#### Push Feel

Coming in as a high-set, just short of medium tactility offering, these have a scratch similar to their linear counterparts that rival the tactile bump for attention. Otherwise, these are fairly as expected with a clean tactile bump and solid collisions with the leaf as well as the housings, which are made of full nylon.

#### Wobble

While there is no top housing wobble, there is a marginal amount of stem wobble with it being just a hair bit stronger in the N/S direction than the E/W direction.

#### Sound

Surprisingly, antithetical to the point of the 'light factory lube' that the Frost Pandas were marketed with, the Aura stems produce a subtle amount of leaf ping which is near the noticeable volume. Otherwise, the Aura Frost Pandas are fairly muted and deep sounding.

#### Context

The same negative points about the hamfisted association with the 'Panda' name can be made here for this switch much like the linear Frost Pandas, though these deserve a bit more credit in that the seller is planning on releasing the 'Aura' tactile stems as a separate, stem-only aftermarket addition which is a fairly uncommon but often appreciated marketing decision by vendors.

#### Other

While I think these switches, as a whole, stand a better chance of longterm success than the linear Frost Pandas they sold alongside given that long-stemmed tactiles in nylon housings tend to fair better to public perception over time, I can't help but wonder if these will actually distinguish themselves amidst the array of other Tecsee tactile offerings in time.
