

Healio

Last Update: 08/15/2021 (V2)

Healio		
Type: Silent Linear		Gateron
26	/35	Push Feel
16	/25	Wobble
6	/10	Sound
9	/20	Context
6	/10	Other
63	/100	Total

Notes

Push Feel

Characteristic of most Zeal switch releases, these switches are for the most part smooth with a subtle hint of scratch in stock form. While the bottoming out is a bit sticky and cushiony for what would make a good silent linear bottoming out, the topping out is much more firm and more in line with expectations.

Wobble

These Gateron made switches feature a pretty standard repertoire of stem wobble with it being potentially problematic for many in both the N/S and E/W directions, with more of an emphasis on the N/S direction wobble. Relative to other releases though, these don't have nearly as much E/W stem wobble which I attribute to the silencing pads to some degree.

Sound

One of the best characteristics of the Healio switch is simply how silent they are at normal activation speeds. While they do start to produce noise closer to a normal, non-silent linear switch at higher activation speeds, they don't produce much in the way of off-putting sounds.

Context

Aside the longevity of the switch in the market, the evolution and ever improvement of silent linears around Zeal's "timeless" designs mixed with even higher price hikes simply make these another outdated offering to date, way too expensive for their performance.

Other

Strong history and performance notes aside, these switches are not only overshadowed by other, better recent switch releases but even by Zeal's own releasing of the Sakurios and Roselios silent linears which have sustained much more community-wide interest.
