19	/25	Wobble
4	/10	Sound
13	/20	Context
6	/10	Other
65	/100	Total

Notes

Push Feel

While KTT haven't produced many tactile switches yet, these almost certainly will be among their worse showings. With a mid-beginning tactile bump, the very long, 'punch like' tactility on these switches is not what many would find appealing in a mid-range tactile switch. Pair this with a thin amount of linear pretravel, a scratch feeling, and inconsistent topping out and these definitely hurt a bit.

Wobble

The wobble on these switches is quite a good point of note as well. Bearing no top housing wobble at all from their winglatch style top housing that KTT (the maker of these most recent Akkos) has become so well known for. Only point of issue is the slightly noticeable stem wobble in the N/S direction and greater stem movement E/W.

Sound

In addition to sound notes that quite fairly match the push feel, these switches also boast a higher-activation speed ping and slap like sound with the top housing that is not pleasant. Decent points are given for the solid sounding bottom out, and decently solid top out slap.

Context

With the context points for these switches being purely driven by design and affordability alone, these are quite a disappointing performance from KTT. The bar they set for themselves with linear releases has only hurt them with respect to this as it is among one of their first westwardly available tactile switches.

Other

Much like with the CS Rose Red, the manufacturer name and contextual points about price and design really do this switch wonders. The tactility, though, needs a lot of work, KTT.
