6	/10	Other
67	/100	Total

Notes

Push Feel

Coming from one of the 'budget' offerings for KTT, the Peaches absolutely deliver the 'bang for buck' expected of KTT with a fairly smooth linear with solid topping *and* bottoming out experiences. Not quite feeling as light as their marketed 45g. springs, the only real thing holding these back is the subtle and consistent scratch feel through factory lube as well as some slight inconsistencies in topping out feeling across a batch, but not by much.

Wobble

Stem wobble on the KTT Peaches is noticeable, but still fairly subtle in both the N/S and E/W directions and not at all unexpected for their budget price range. The biggest issue, which has been noted before in other budget KTTs, is a subtle N/S give in the top housings even though they are of the winglatch style.

Sound

Even though a bit thin sounding at both ends of the switch, the topping and bottoming outs are still fairly close together and muted for being different materials. As well, at higher activation speeds a slight spring ping becomes noticeable, taking from the score a bit.

Context

Being one of the more recent KTT releases to date, and coming after several rounds of previous releases, these switches show KTT's capabilities and consistencies across time in a new colorway and fair price, but ultimately don't push the boundaries much design wise.

Other

Aside what is stated in the 'Context' section above, the one good thing this decent re-hash of a switch provides is yet another traditionally light weighted linear option at 45g. With a general decrease in availability of KTT Sea Salts, these will continue to fill a light weight, decent, and budget linear option for the community in the meantime.
