Notes

Push Feel

Using a set of 'updated' molds and factory lubing, this iteration of KTT's budget line of switches does everything the old set did but just the slightest bit better. Coming with a polycarbonate top housing and nylon bottom housing, the topping and bottoming out experiences are just a bit more balanced and less thin, with the factory lubing taking a bit more of the subtle scratch feeling away from the linear switch.

Wobble

While the stem still has the same noticeable N/S and E/W direction stem wobble as previous KTT switches (Sea Salt, Peach, etc.), the top housing give that occurred in much of the KTT budget line now appears to be gone with the Kang White switches.

Sound

With just a very slight decrease in spring ping at higher activation speeds, the Kang Whites sound very similar to other KTT budget linears with a subtle scratch noise, and hollow yet fairly well-balanced topping and bottoming out sounds.

Context

Even though several iterations of switches and a distinct increase in popularity in the western half of the community, KTT's budget line still stands as an incredible option at \$0.27 per switch with these even offering progressive springs which are a bit noticeable towards the end of the return stroke at such a low price.

Other

KTT's willingness to continue to improve molds and lubing techniques, and even so for budget options which are not the biggest 'money makers' in a business is certainly refreshing and continues my personal excitement, as well as the community's at large, for future KTT releases.
