

Cow Orange

Last Update: 10/10/2021

Cow Orange		
Switch Type: Linear		Tecsee
25	/35	Push Feel
18	/25	Wobble
6	/10	Sound
13	/20	Context
6	/10	Other
68	/100	Total

Notes

Push Feel

These 63.5g, reduced travel distance linears are actually fairly par for course for other Tecsee linears (which is assumed where these are from even though the runner won't disclose such). Fairly but not overly smooth, and with a well-balanced topping and bottoming out feeling, the biggest issues come in just how thin and sharp feeling the bottoming out on the stem pole *is*. Fans of super sharp bottoming out ala Moyu Blacks will absolutely love these.

Wobble

The stem wobble is actually rather good on these switches, overall, with only a potentially noticeable amount in both the N/S and E/W directions, though there is one slight concerning point in that the wobble that is there seems to have some sort of chunky internal collisions which doesn't normally happen on switches.

Sound

The sound of the Cow switches is actually really where the balance between the topping out and bottoming out shines in these switches. While there is a decent amount greater scratch noise as activation speeds increase, the topping and bottoming out remain equivalently pitched with a sharp, but not prickly type sound that isn't *my* forte but certainly someone out there's.

Context

Released really without any marketing, these switches initially ran by Infinity Key out of Vietnam as well as a few other proxy vendors featured an array of four colors to choose from as well as both POM (these) and UHMWPE stem versions. While certainly a neat idea, a slightly too high price at \$0.65 per switch mixed with this lack of marketing will likely see them fade from existence relatively quickly compared to other "lines" of switches.

Other

The one rather interesting thing that switch modifiers will love about these switches is their uniquely long stems which will almost certainly be the most memorable portion of the Cows.
